OBJECTIVE

Java Backend Developer with 1.6+ years building secure, scalable microservices using Spring Boot, Spring Security, and MySQL including service discovery, API Gateway routing, JWT-based auth, and Dockerized deployments on AWS EC2.

EDUCATION

Bachelor of Engineering in Computer Science

CGPA: 8.65

2021 - 2024

Savitribai Phule Pune University, Pune

SKILLS

Languages	:	Java, SQL
Framework & Libraries	:	Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs
Microservices	:	Eureka, API Gateway, OpenFeign, Load Balancer, Config Server
Database and Caching	:	MySQL, Redis, JDBC
Cloud & DevOps	:	AWS EC2, S3, IAM, CloudWatch, Docker (Containerization), Jenkins
Tools	:	Git, GitHub, Jira, Postman, Maven, Swagger/OpenAPI

WORK EXPERIENCE

Software Engineer

Apr 2025 – Present

BridgeLabz Pvt Ltd, Mumbai, Maharashtra

- Designed and developed REST APIs using Java, Spring Boot, Spring Data JPA, and MySQL for enterprise backend applications, covering business logic, request validation, and centralized exception handling.
- Integrated JWT-based authentication and role-based authorization into microservices, securing API endpoints against unauthorized access across service boundaries.
- Collaborated within a microservices architecture, handling inter-service communication and contributing to API-level security reviews with cross-functional teams.
- Containerized backend services using Docker and supported AWS EC2 deployments and CI/CD workflows, reducing manual deployment steps for production releases.

PROJECTS

NPS Launcher - Net Promoter Score Analytics Platform

BridgeLabz Pvt Ltd | Java, Spring Boot, Microservices, REST APIs, JPA/Hibernate, MySQL, Docker

- Built Spring Boot REST APIs for survey creation, scheduling, response collection, and NPS score calculation, with RBAC enforced through standardized API contracts.
- Implemented NPS computation logic and respondent categorization, giving stakeholders participation and feedback data to support decision-making.
- Designed a microservices architecture using Eureka Service Registry and API Gateway for service discovery, centralized routing, and independent deployment of services.
- Optimized MySQL queries, JPA/Hibernate mappings, database indexing, and caching, reducing report-generation time by 25% and improving dashboard responsiveness.
- Containerized all services with Docker for consistent local and production deployment.

E-Commerce Web Application

[GitHub](#)

Java, Spring Boot, REST APIs, JWT, JPA/Hibernate, MySQL, Redis, Kafka

- Developed an e-commerce platform using Spring Boot for managing users, products, and orders.
- Secured REST APIs using Spring Security (JWT) with role-based access control for customer and admin roles.
- Used Redis for caching frequently accessed data and integrated Kafka for event-driven order processing and inventory updates.
- Added Spring Boot Actuator for health/metrics monitoring and documented all endpoints with Swagger, making the API easier for other developers to integrate against.

CERTIFICATIONS & ACHIEVEMENTS

- Solved 450+ DSA problems on [LeetCode](#)
- [AWS Cloud Practitioner Certified](#)
- [Java Full-Stack Certification](#)
